INTRODUCTION

The third edition of the *North Dakota Statistical Abstract 1988* is a reality due to its popularity among its users. The response to the 1979 and 1983 editions has been enthusiastic and positive. Users inside the state, in other states, and outside the country, have told us the *Abstract* is the best single reference volume on the State of North Dakota, specifically the land, people, economy, and government. The *Abstract* has been identified by economic development specialists an efficient source of information on communities, counties, and the state's economy.

The purpose of the *Abstract* is to provide the reader or researcher with ready access to a wide variety of data which would otherwise require locating and consulting many different sources, most of which are from federal agencies, some from state agencies, and a few from private non-profit associations or corporations. The major value of the *Abstract* then, is convenience. A value derived from this is the benefit provided in the form of a compendium of sources. A user can not only acquire basic data about the state but also a list of sources for further consultation.

The guiding criterion used in the construction of all three editions of this work has been to utilize the most recent and complete sources of information. This means that we have relied on official publications of government or private agencies charged with collecting and maintaining current and historical data files on a particular subject. The decision as to which data to present on any particular subject has followed the two-fold goal of providing the most recent data possible as well as sufficient historical data to allow the user to form a perspective on the underlying trend in that particular data series. The goals include emphasizing both current and historical needs for information. A user needing historical or time series data on a particular subject is advised to consult the former edition of the *Abstract* so as to gain a longer time frame. This reflects the policy used in constructing the current and former edition of supplying the most recent of the historical data at five or ten year comparisons.

Data are presented at various levels of aggregation. State-level data are frequently compared with data for other states especially states within the North Central Region. Whenever possible, county-level data have been provided to facilitate evaluation and comparison of counties. Whenever possible, data has been given for the state's fifteen largest municipalities.

As with the former editions, this edition presents enough maps to help orient the user to North Dakota and provide a spatial perspective for county and regional comparisons. The Geography and Climate section presents maps illustrating the geological and climatological characteristics of the state, the first step in economic geography. North Dakota is an excellent example of the principle that the land defines the economic activities of its people.

*A new feature of this edition of the *Abstract* is its availability on microfiche and computer diskettes. The current edition is offered in these different forms in hopes of meeting the needs of all our users, from libraries to researchers, to students needing a quick reference work.

The differences between this edition and the second edition are minor and few. Tight budgets at both the federal and state level have forced the elimination of some data series. Tight budgets in the state's economy during the eighties resulted in the cessation of published data sources in a few areas. In these cases data was drawn from the original file, usually computer tape, on which the data is stored. Should these publications be continued in the future the source for the information contained herein will revert back to these published sources.

The usual warnings about using and interpreting the data are offered. The data contained in this edition, like former editions, are either census data or sample data. The former are more reliable than the latter due to the fact that census data are based on a complete enumeration of the population of items of interest. This allows us to use this data with greater confidence to statistically describe the population of items. Data drawn by sampling techniques must be used with greater caution. Sampling data is more prone to errors, or bias, due to the fact that only a part of the population is studied. All data included in the *Abstract* are from sources where professional statisticians have been consulted on sample design. Thus users can feel confident in sample data, that sampling techniques were used specifically designed to minimize error or bias.

Users should also be aware that discrepencies sometimes exist between similar data from different sources. These differences are most often due to differences in definitions, assumptions, and collection methodologies. The user will have to consult, in these cases, the original sources cited to determine the causes of these differences.

This edition of the *Abstract* has been made possible through the financial assistance of a number of state government agencies and institutions. First, the grant to purchase the labor necessary to update the tables was provided by the North Dakota Economic Development Commission and the North Dakota Office of Intergovernmental Assistance. Second, the grant necessary to purchase the labor to enter the data and print the tables was supplied by the Bureau of Business and Economic Research at the University of North Dakota. Third, the grant necessary to pay the printing and binding expenses was supplied by the Office of the Dean, College of Business and Public Administration, University of North Dakota. The project would not have been possible without this financial assistance.

This edition of the *Abstract* has been made possible only through the labor of many individuals inside and outside the state. The labor of the people collecting, processing, and publishing the data in the federal government, state government, and private associations and corporations is essential to a publication such as this. All of them shall remain nameless in this edition, because there is not enough space to thank everyone. The libraries and their staffs must also be mentioned. One of the great values of our public libraries is the information they contain. Virtually all the sources cited herein are available at one of the three main libraries in the state: The University of North Dakota, North Dakota State University, and the North Dakota State Library.

Comments by users regarding the scope and content of this edition will be greatly appreciated. This feedback is essential to tailoring the *Abstract* to fit the needs of our users. Suggestions for changes should be directed to the project editor who is also responsible for any errors or omissions contained herein.

Note: Data relates to full and part-time manufacturing production workers. The average earnings are "gross," i.e., they reflect not only changes in basic hourly and incentive wage rates, but also such factors as premium pay for overtime work and shift differentials. The work week information relates to average hours worked or paid for and is somewhat different from scheduled hours because of such factors as absenteeism, labor turnover, part-time work and stoppages.

SOURCE: U.S. Bureau of the Census, Census of Agriculture, various years.

[1] Years 1954 to 1982 refer to the census years. Other years refer to calendar year preceding census.

[2] Not fully comparable for all census years because of differences in definition of cropland used for pasture only.

[3] Includes some duplication where more than one crop harvested from same land.

[4] Irrigated cropland harvested only.

[5] Includes some public lands leased and re-leased by Grazing Associations enumerated as farms in 1964 Census.

* Gross sales reported to North Dakota Tax Department.

** Variations in special fuels sales reported herein are attributable to changes in the special fuels law over the years. In 1955 the "user" type law was replaced by a "dealer" law whereby dealers became responsible for collecting and remitting tax. In 1959 a 2% tax was levied on fuel sold by heating, agricultural, or railroad purposes. Prior to July 1, 1959 such fuel was tax exempt. Caution must be exercised when comparing pre-1959 sales with subsequent years.

* Under Article I, Section 3 of the Constitution of the United States, each state is entitled to elect two United States Senators who hold office for a term of six years. However, so that the terms of the state's first Senators would be staggered, one was elected for a period of two years and the other for four years. The Constitution originally provided that Senators were to be elected by the Legislatures of each state. The Seventeenth Amendment to the Constitution, effective May 31, 1913, provided that Senators should be elected by popular vote of the people.

* Under Article I, Section 2 of the Constitution of the United States, each State shall elect one or more Representative to Congress. The number of Representatives is based upon each State's population in relation to that of the entire nation as enumerated by the Federal discennial census. Thus, North Dakota had one Representative from 1889-1902, two from 1903-1912, three from 1913-1932, two from 1933-1972 and at present one.
